Work experience and achievements.

A serial entrepreneur and inventor with over 30 years of experience in developing innovative technologies and building successful businesses from scratch. I independently generate business ideas, draft comprehensive business plans, and create detailed financial forecasts, including balance sheets and cash flow projections. I am highly adaptable, capable of forming or integrating into any team, and consistently expanding my technical and managerial skills.

Throughout my career, I have launched multiple startups, creating thousands of jobs and pioneering technologies with global impact. My companies have employed between 1,000 and 1,200 people, reflecting my ability to scale operations effectively.

CEO and founder of Green Tail 2024 Based in Winchester, England, United Kingdom. Developed and patented environmentally friendly technology for processing manure and producing organic fertilisers, graphite, drinking water and green energy from it. This technology will completely eliminate greenhouse gas emissions from manure in agriculture and produce a unique product that has no equivalent in the world in the form of organic fertilisers with any formula. The technology is

completely green and does not consume energy from fossil fuels. By processing all manure in the UK, farmers can switch completely to organic fertilisers and organic production. Presentation of the technology here: https://green-tail.uk/pitch_deck_video_eng.mp4

Currently seeking investment to launch the project. Company website: <https://green-tail.uk/>

CEO and founder of Natural Health Garden 2023 On site, Winchester, England, United Kingdom. Production of CBD oils, CBD cosmetics and CBD treats for animals. Unique recipes have been developed using oils from milk thistle, pumpkin, amaranth and hemp seeds. The use of these oils will enhance the beneficial properties of the final product and enable the production of products with a higher content of all 11 essential amino acids necessary for optimal health and functioning of the human body, as well as unsaturated or 'good' Omega 3, Omega 6, Omega 9, a full spectrum of vitamins and microelements necessary for the human body. All these components, which are part of the oils that form the basis of the final product, are in a form that is easily digestible by the body and are completely absorbed by the human body. In addition, the finished products will have a number of additional therapeutic and preventive properties. The components they contain promote liver cell regeneration, strengthen blood vessel walls, remove cholesterol, and are used in the prevention and treatment of cancer. Thanks to these oils, the final product will have additional beneficial properties compared to conventional products based on CBD extracts.

I am currently looking for investment to launch the project. Company website: <https://naturalhealthgarden.uk/>

CEO and founder of Sun Garden Farm 2017- Remote Kozelets, Chernihiv, Ukraine Specialisation: gardening, growing honeysuckle. The garden covers an area of 27 hectares. An automatic system for controlling soil moisture, irrigation and fertiliser application throughout the season has been developed and implemented. Automation has created ideal conditions for plant growth and development, improving berry quality and increasing yields. One person worked in the garden.

The business was seized during the war with Russia.

CEO and Founder of Ukragro Produkt LTD 1999-2014 Development of new technologies and production of unique equipment for the food industry. I developed and implemented three unique technologies at my own factory that have no analogues in the world. I also developed and implemented more than 100 units of non-standard equipment at my own factory, which made it possible to improve product quality and increase the factory's productivity several times over.

Business seized during the war with Russia

CEO and founder of Ukragro Trade LTD 1995-2014 Alchevsk, Luhansk, Ukraine Production of groats and flakes. The plant's capacity is 6,000 tonnes of groats per month, with a range of over 50 products.

Business seized during the war with Russia

CEO and founder of Olan LTD 1995 - 2014 Alchevsk, Luhansk, Ukraine Design and construction of food factories and industrial complexes for agricultural enterprises, laying of gas pipelines, water pipelines, and electrical networks.

Business seized during the war with Russia

CEO and founder of Interagro Ltd 2005 - 2010 Romny district, Sumy, Ukraine Agricultural enterprise with 10,000 hectares of land specialising in crop production. Developed and implemented technology that allowed 130% of the land to be cultivated in one season. At the same time, field work during crop sowing was reduced by 20%. The first in Ukraine to implement a precision farming system, the company John Deere gave presentations to other farmers at the enterprise. In collaboration with Poltava Agricultural University, engaged in wheat and barley breeding. He conducted research on the cultivation and yield of corn hybrids from the world's top producers. Up to 50 hybrids were grown on demonstration fields in a single season. In 2010, I designed and built an electric aircraft with a wingspan of 1.2 metres, equipped with a video camera and controlled from the ground. The aircraft had a flight radius of 1 km and was equipped with a video camera that transmitted images online to a computer (used for aerial inspection of fields and identification of problem areas for research and problem solving).

The business was sold in 2010.

CEO and founder of VAG LTD 1993 - 1996 Alchevsk, Lugansk, Ukraine Construction and operation of a food, clothing and household goods market. Area: 30,000 square metres.

The business was sold in 1996.

Design Engineer, Kommunar'sky Metallurgical Plant, Alchevsk, Lugansk, Ukraine 1988 - 1993 Development and implementation of automation systems for the metallurgical industry, developed 27 non-standard automation systems (production of pig iron, steel, rolled products, etc.)
