

GREEN TAIL

Unique technology of producing organic fertilisers, graphite, drinking water, and electricity from manure.

PROBLEM

Agriculture contributes 12% of all greenhouse gas emissions in the UK, mainly from fertiliser and manure.

Manure runoff :

- pollutes water (think dead zones!),
- methane supercharges climate change,
- improper storage harms air quality.

Big cost for the environment, big challenge for the UK government that committed **to zero emissions by 2050.**

SOLUTION

Transform Manure into Opportunity

Our innovative technology recycles manure on-site, and allows to get fertiliser for agricultural needs, graphite, green electricity and drinking water.

Fully sustainable:

- Zero waste - Zero storage
- Fossil fuel free
- NO emissions

\$40B by 2033
CAGR for 2024-2033: 6.2%

\$2.48B by 2030,
CAGR for 2024-2030: 3.2%

by 2032 we'll produce up to
up to 220K tonnes of graphite/year,
1/5 of global need

Drinking water
up to 118M tonnes/year

Green electricity
up to 207 GW/year
